Hexagon Metrology Introduces TesaStar P CMM Touch Probes

Product Release

North Kingstown, Rhode Island, April 27, 2005. Hexagon Metrology division Tesa SA (Switzerland) has introduced the TesaStar P five directional sensing CMM touch probes at the Control Exhibition, Sinsheim Germany. Four versions of the touch probe will be available, with different triggering force, color coded for easy identification. The probes are M8 threaded for easy use with a variety of probe heads, including the new TesaStar M motorized probe head, also announced at Control. The probes also use standard M2 styli, also available in kits from TESA.

The TesaStar P will be available exclusively on the new MicroHite DCC entry level automated CMM, announced earlier this year, and marketed around the world under several Hexagon Metrology brands including Brown & Sharpe, Sheffield, CEJohansson and TESA. The addition of this product further complements the Micro-Hite DCC, sold primarily as an integrated metrology system solution comprised exclusively of Hexagon Metrology group components and software.

The Hexagon Metrology group of Hexagon AB (Sweden) is the world's largest manufacturer of precision dimensional measurement equipment and software, with ten manufacturing facilities on four continents and more than forty sales and support locations worldwide. Hexagon's brands include Brown & Sharpe, CE Johansson, CIMCORE, DEA, Leitz, PC-DMIS, ROMER, Sheffield and TESA. More information can be found at www.hexagon.se
